EDUCATION

B.E. in Electronics and Telecommunication Engineering — Pune Institute of Computer Technology (PICT), Pune *Aug 2023 – May 2027 (Expected)*

GPA: 9.13 / 10 | Relevant Coursework: Data Structures, Database Management Systems, Computer Networks, Network Security, Data Analytics

LANGUAGES & TECHNOLOGIES

Programming & Query Languages: Python, SQL, T-SQL, C++

Data Engineering: PySpark, ETL/ELT, Change Data Capture (CDC), Incremental Loading, Medallion Architecture, Workflow Orchestration

Data Modeling & Quality: Dimensional Modeling, Star Schema, Data Validation & Reconciliation

Databases: MySQL, PostgreSQL

Tools & DevOps: Git, GitHub Actions, Docker, CI/CD Pipelines, Kafka (Redpanda), dbt, Dagster, Apache Airflow

Cloud & Infrastructure: Azure, Cloud Storage, Terraform (HCL)

PROJECTS

LedgerPulse — CDC-Based Transaction Data Platform for a Digital Wallet

- Built an end-to-end CDC pipeline (PostgreSQL → Debezium → Redpanda, a Kafka-API-compatible broker) replicating a simulated digital-wallet ledger in near real time, capturing ~6.3M transaction events without a single query touching the source database.
- Modeled a dimensional warehouse in dbt Core on DuckDB (transaction-grain fact table plus SCD Type 2 dimensions) and documented design trade-offs in a written architecture decision record.
- Reimplemented core transformation logic in PySpark on Databricks as a distributed-compute counterpart, validating consistent business logic across both engines.
- Orchestrated transformations with Dagster (freshness sensors, automated retries), wrote 45 dbt tests, and configured GitHub Actions CI to run the full suite on every pull request.

Tech: Python, SQL, PySpark, Databricks, Azure, dbt, Kafka (Redpanda), Dagster, PostgreSQL, Docker, GitHub Actions, Git

Reddit Analytics Integration Platform

- Built an end-to-end ETL pipeline to ingest, transform, and analyze Reddit data, organizing the workflow into modular ingestion, transformation, and storage stages following industry-style data engineering practices.
- Orchestrated the pipeline with Apache Airflow, defining task dependencies, retries, and scheduled runs for automated, reliable execution.
- Built dbt transformation models to clean raw data and prepare analytics-ready datasets.
- Provisioned infrastructure as code with Terraform (HCL) and containerized the project with Docker for consistent, reproducible local setup.

Tech: Python, Apache Airflow, dbt, Docker, Terraform (HCL), SQL, ETL Pipelines, Data Modeling, Cloud Storage

EXTRACURRICULAR

PICT Finance Society (PFISOC) — Member

Aug 2024 – Mar 2025

- Co-organized 2 expert sessions and multiple market-analysis group discussions, strengthening communication and analytical skills.
